

ALREADY COMPOSTING?

How the new green lidded organics bin can still help you.

If you love gardening, you'll already know the benefits of a great composting heap or backyard worm farm.

Gumboots Kimball - Garden Expert

Consider the green lidded organics bin an extension of your great work.

Some people find it tricky getting the right blend of 'green' and 'brown' materials, and those worms can be fussy eaters.

There's no doubt the green lidded organics

bin will complement what you're already doing, and here's why it will come in handy.

ORGANICS

WE'LL TAKE SOME OF IT,
OR ALL OF IT - THANKS

Not only will we take excess material such as lawn clippings and leaves, check this list for items that can also be disposed of in the organics bin.

- ✓ Meat products, seafood, bones & dairy products
- ✓ Fruit fly infected fruit (bagged in a compostable liner)
- ✓ Citrus fruits
- ✓ Cooked foods, oils & fats (absorb liquids in paper first)
- ✓ Kitchen paper towels and soiled tissues
- ✓ Pet manures (bagged in a compostable liner)
- ✓ Diseased plants
- ✓ Weeds

IT'S ALL A MATTER OF DEGREES

Unlike your residential compost heap, at the commercial composter, the process is scientifically monitored, achieving temperatures well above those you normally achieve at home. The green lidded organics bin can accept what your compost heap is often better off without.

KEEP UP THE GOOD WORK

If you're already composting or worm farming at home, congratulations! Consider the green lidded organics bin an extra tool for your leftovers!
