

# Halve Waste

reduce • reuse • recycle

Correct disposal of problem waste helps to minimise harm to the environment, wildlife and people.

## PROBLEM WASTE

### WHAT IS PROBLEM WASTE?

Problem Waste is waste that cannot go into any of your kerbside bins. **These items include: household & car batteries, gas bottles/cylinders, motor & cooking oil, paint, light globes/fluro tubes, smoke detectors and fire extinguishers.**

Problem waste items are known to cause serious harm to the people involved in transferring or processing the waste material as well as causing fires, chemical spills and other preventable disasters. This is why these items cannot go into any of your kerbside bins.

### DROP OFF PROBLEM WASTE AT DESIGNATED FACILITIES

Problem Waste must be dropped off at designated transfer stations and recycling centres so they can be recycled and disposed of correctly, without harming people, wildlife and the environment.

### PROBLEM WASTE IS RECYCLED INTO NEW PRODUCTS

When recycled correctly, Problem Waste is turned into reuseable materials which can then be used in new products.

Plus, it helps to protect natural resources and eliminate toxic materials ending up in landfill.
